

# MEIN NORMENRADAR – MONITORING THE DEVELOPMENT OF STANDARDS IN REAL TIME

## Recognizing changes, adjusting plans and minimizing risks early on

meinNormenRadar is your innovative online solution if you want to know what is going on in the development of standards that are relevant for you. Thanks to a clear colour code system you can immediately see how a standard developed in the past or whether changes are planned – and where you should actively contribute to shaping standards.

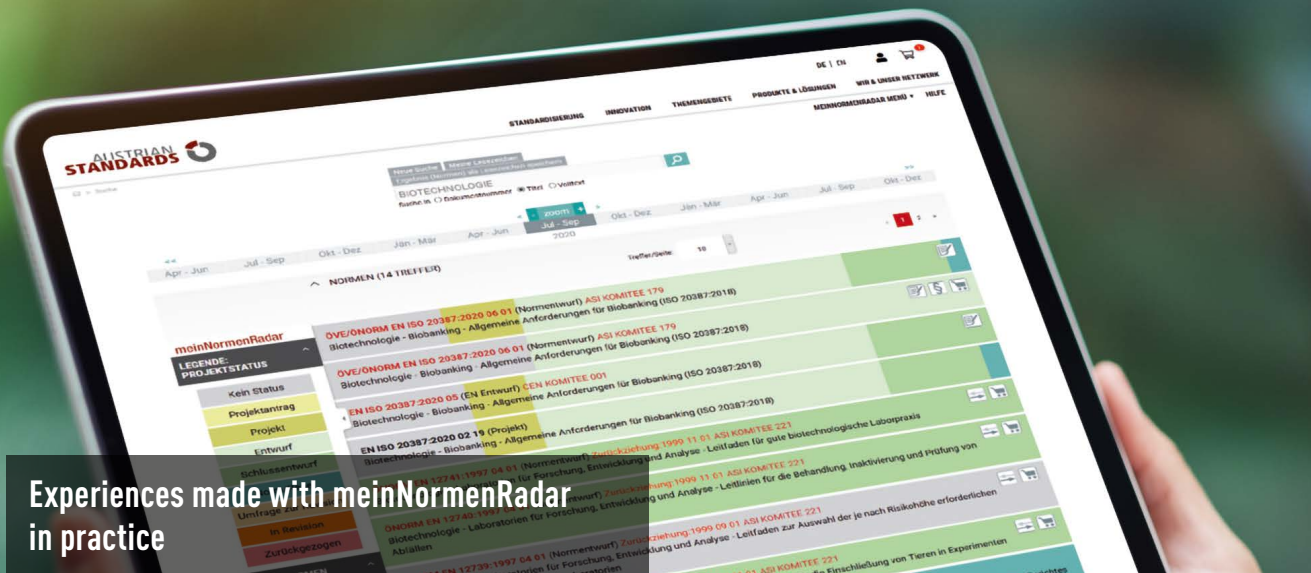

As a result, you gain a decisive information advantage and can take the right steps for your company and your production early on.

### Available standards

ÖNORM, ONR, ÖVE/ÖNORM, ÖNORM DIN, ÖNORM EN, ÖNORM EN ISO, ÖNORM ISO, ISO, ISO/IEC, IWA and CWA issued by Austrian Standards, CEN und ISO

### Available legislation

Austrian federal and regional law gazettes, Official Journal of the EU

## Experiences made with meinNormenRadar in practice

„Which standards are being revised or drafted? What is the status of individual projects? To answer such questions our EU-notified safety testing laboratory uses meinNormenRadar. Thanks to the simple structure and the search and filter functions of this tool, we always have a good overview and keep abreast of new developments. I am very happy about its user-friendliness and the research options available.

After all, I chair standardization committees and frequently have to get information on specialized topics from fields in which I am not directly involved. I definitely would purchase meinNormenRadar again.“

**Ing. Thomas Manek MBA**  
AUVA

## meinNormenRadar optimally helps you

### When standards relevant for you are revised

You know when and which changes are going to be implemented. Thus, you can adjust your products and services to changed market conditions in due time.

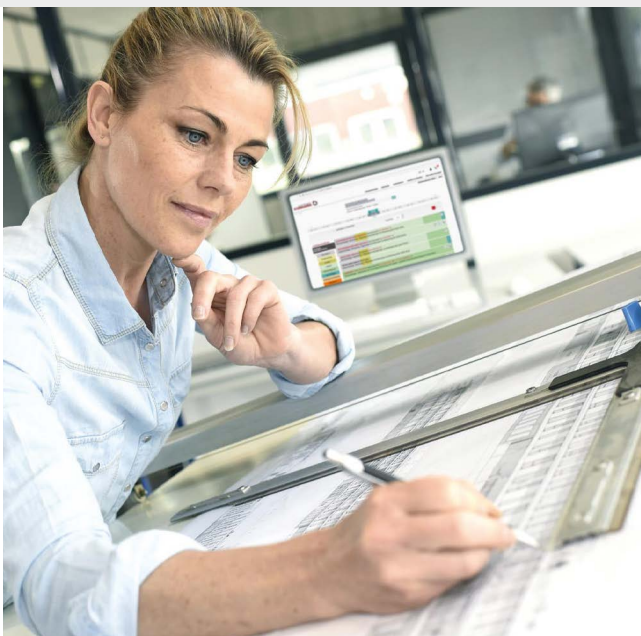

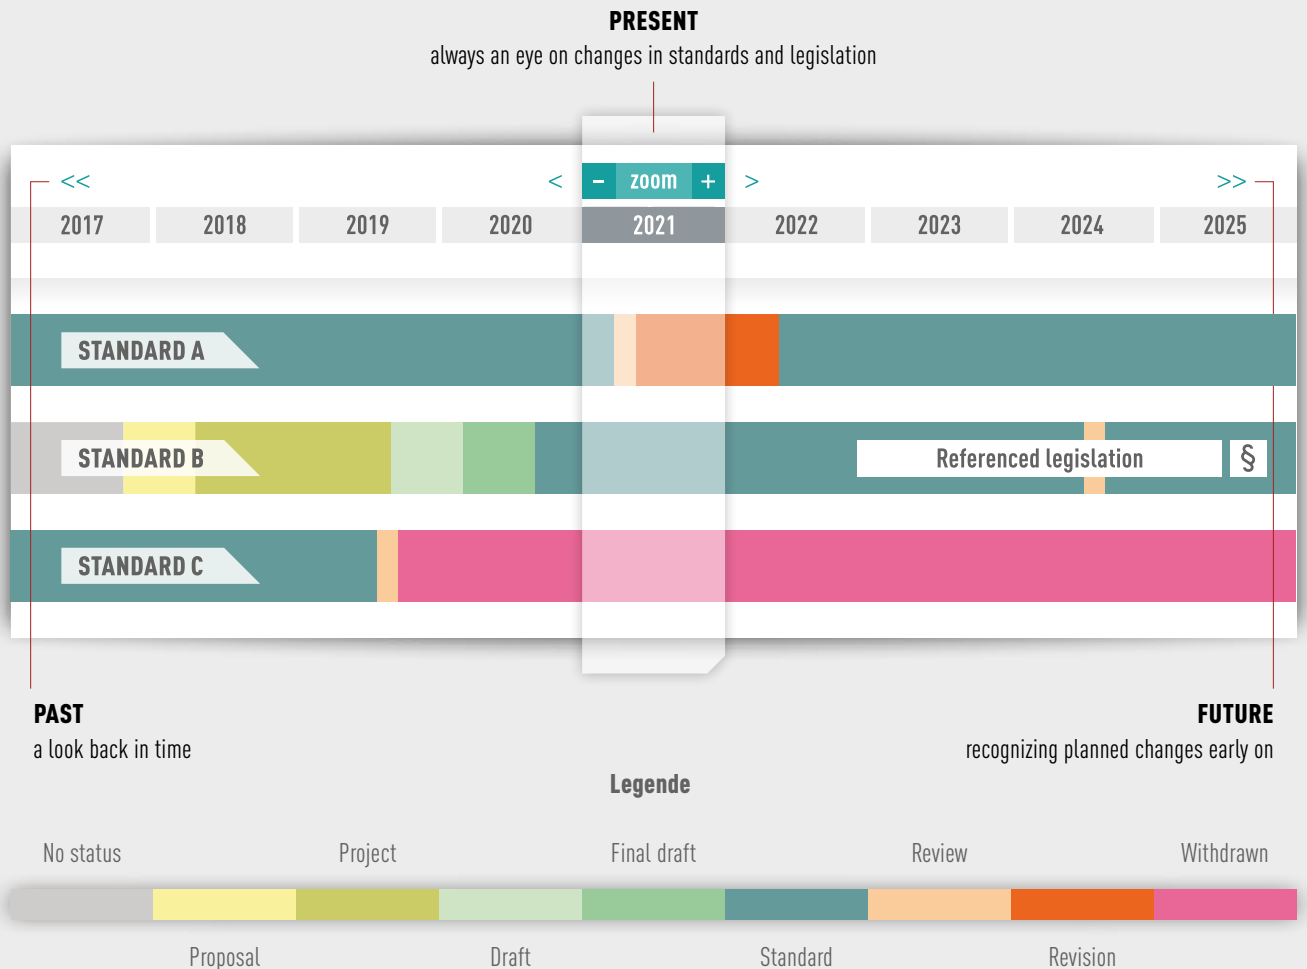

### When Austrian laws make reference to standards that are relevant for you

meinNormenRadar draws your attention to laws referring to your standards and allows you to directly access these legal texts.

### When you need to know which standard was in effect on a specific date

In case of claims for damages it is particularly important to check quickly the standard that was valid at the time in question.

# PRESENT, PAST AND FUTURE – THIS IS HOW MEIN NORMENRADAR WORKS

## Arrange a consultation now!

If you have any questions, please contact our Customer Service. We will be pleased to advise you in detail – on the phone or in person on site.

# FUNCTIONS AND THEIR BENEFITS

## Recognize market-relevant developments early

A colour code system identifies the phases in the lifecycle of standards and shows you which updates are being planned. Thus, you can adjust your products or services to changed market conditions in good time.

## Finding instead of searching

Search by title or document number or in the full text in a targeted way. Further refine the search results by means of filters (e.g. status changes, document type, subject field, type of legal reference, etc.).

## Profit from synchronized favourite folders as an effects 2.0 customer

All ÖNORM and ISO standards included in the portfolio of your standards management solution effects 2.0 and the favourite folders in effects 2.0 are synchronized automatically and are available as bookmarks in meinNormenRadar.

## Find out which legislation refers to your standards

Standards referred to in legislation are specifically flagged and can be quickly found by means of filters. The related legal acts are described by their number, title, scope and date of publication and are provided with a link to the full text in the legal information system RIS of the Austrian Federal Chancellery or in the EUR-Lex system of the European Union.

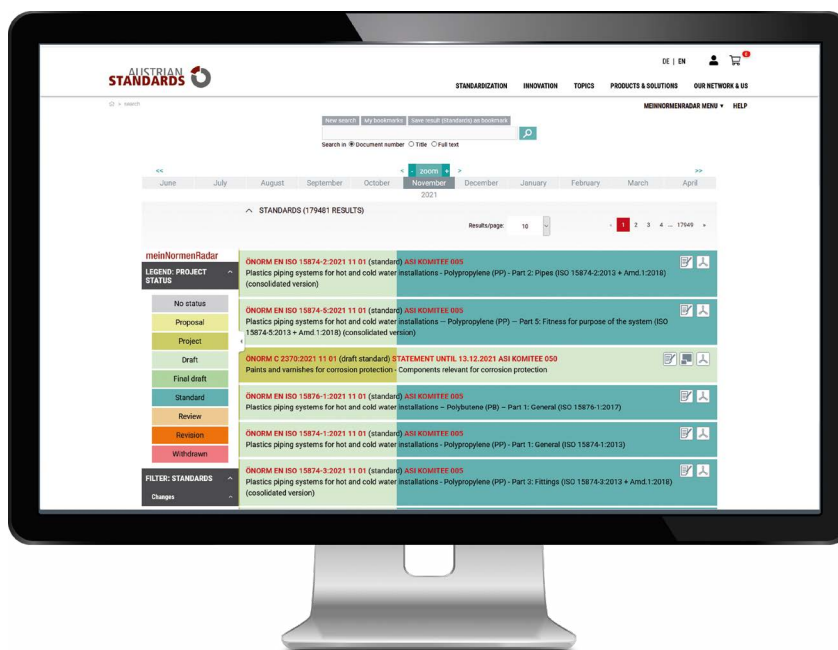

## Recognize opportunities for shaping standards in time

As projects proposed are also identified by a separate status, you can see, monitor and influence the development of new topics earlier. When proposed projects or drafts are open for public consultation, you can directly submit your comments. The deadline is clearly shown.

## Get information on changes by e-mail

Austrian Standards regularly checks your bookmarks for status changes. When you „subscribe to Info Mail“, you are informed of standards with status changes by e-mail at the interval specified (daily, weekly, monthly or quarterly).

## Save your regular search queries

You can bookmark frequently used standards and entire hit lists for future queries and organize the bookmarks in folders.
